+91-9121717703

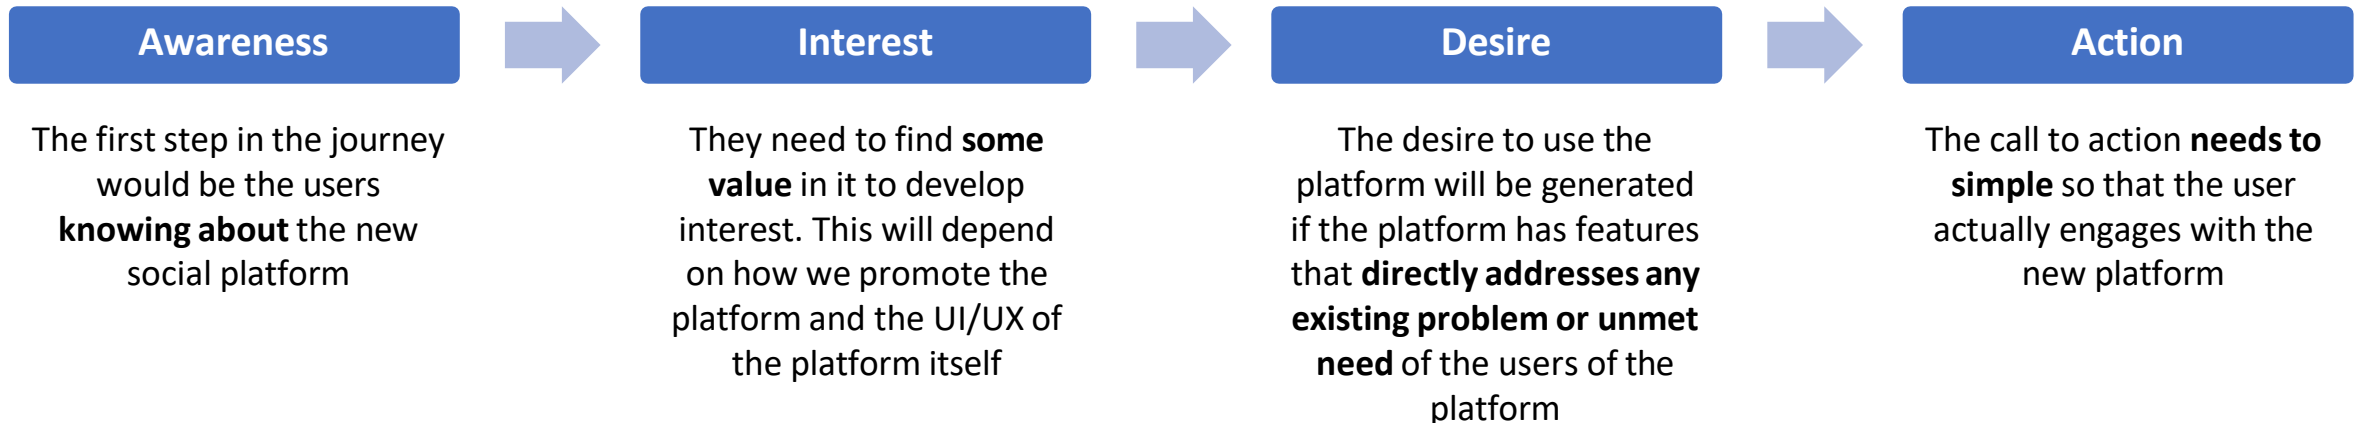

Problem statement and Objectives

“You have realised from understanding your users’ online behaviour that gamers love to interact with other gamers on platforms like Reddit, Tumblr, Discord and share their experiences with people with similar interests. You want to leverage this behaviour and create a social engagement feature on your own platform, which could act as an extension of current games on the platform and also help in moving the needle for user engagement.”

The objectives hence identified are:

1. ***Introduce a social engagement platform on the app***
2. ***Drive usage of the engagement platform***

User journey stages

User Personas for Zupee

Ayush

- 30 years, runs his general store in an urban locality
- **Daily average time spent** on gaming apps: **3-4 hours**
- Uses Zupee exclusively to make small amounts of money daily. Finds Zupee games to be simple enough to play, but does not find the return on his time investment into the app to be proportionate
- **App engagement with Zupee:** HIGH

Rishabh

- 21 years, engineering student lives in the college hostel
- **Daily average time spent** on gaming apps: **1-3 hours**
- Rishabh plays different games on different apps, but prefers the ones in which he can build up and keep a track of his progress as a proxy his expertise in the game. At the same time, he likes to track the progress of players who are better than him in the games he plays
- **App engagement with Zupee:** MEDIUM

Divya

- 35 years, runs a local bakery from the premises of her home
- **Daily average time spent** on gaming apps: **0.5-1 hour**
- Takes breaks from her daily routine to play a couple rounds of her favourite games and then returns to her work at hand. Likes to play multi-player games with her neighbourhood friends from the society in which she lives.
- **App engagement with Zupee:** LOW

Problem area	Intensity for Ayush	Intensity for Rishabh	Intensity for Divya	Frequency for Ayush	Frequency for Rishabh	Frequency for Divya
Cannot play friends exclusive games	★	★ ★	★ ★ ★ ★ ★	★	★	★ ★ ★ ★ ★
No interaction with other players during or after gameplay	★	★ ★ ★ ★ ★	★ ★	★	★ ★ ★ ★ ★	★ ★
No recognition for gameplay and earnings	★ ★ ★ ★ ★	★ ★ ★ ★ ★	★ ★	★ ★ ★ ★ ★	★ ★ ★ ★ ★	★
No long term game progress tracking	★ ★	★ ★ ★ ★ ★	★	★ ★ ★	★ ★ ★ ★ ★	★

Players like Rishabh will have the highest number of power users and largest total addressable market in the user cohorts for Zupee and hence should be targeted first

Possible solutions to identified problems

Problem areas to be targeted

No interaction with other players

No recognition for gameplay and earnings

No long term game progress tracking

Features	Details	Problems targeted
Creating private games	Option for users to create a private game with a shareable link that can be forwarded to friends	No interaction with other players
Friends	User can search other Zupree users and send request to add them to their friend lists	No interaction with other players
Zupree Rich clubs	Since the USP of the platform is earning actual money, it would give a boost to players by providing them exclusivity on the basis of the money they have earned. This exclusivity will be coupled with profile badges, access to special games, etc.	No recognition for gameplay and earnings
Create tournaments	This feature will be made available to users who are members of the defined exclusive clubs. They can define the entry amount and date of holding such tournaments. These tournaments can be open or made exclusive according to the profile of the tournament creator	No recognition for gameplay and earnings
Posts	Each game will have a dedicated post section where people can share their experiences or achievements. For example, Snakes and Ladders community can have users post their experiences while other players can interact with it through likes/comments, etc.	No long term game progress tracking
Leaderboards	Leaderboard updates for tournaments or weekly challenges. These will be categorised game-wise	No long term game progress tracking

Analysis of proposed features

Ideally the number of features of picked would depend on the deadline vs available resources evaluation. Since those are not mentioned, I will pick the best solution to each problem identified assuming appropriate resources availability to implement them

	Feature	Reach (0-10)	Impact (1-5)	Confidence (1-5)	Effort (1-5)	Final score	Feature specific Success metrics
	Creating private games	6	3	4	3	24	Number of private games played
✓	Friends	8	5	4	2	100	Number of friend requests sent/accepted
✓	Zupee rich clubs	10	4	4	3	32	Number of qualifiers for each club tier
	Create tournaments	6	3	3	3	18	Number of tournaments played
	Posts	6	5	4	4	30	Page activity, average time spent by user on communities
✓	Leaderboards	8	4	3	2	48	Number of posts in each community and user activity on posts (likes/comments)

Implemented solutions

Friends

“The most basic form of user interaction”

User benefits:

- Ability to search other users on the Zupee platform
- Adding friends to your friend list through sending and accepting requests

Features:

- **New menu item:** A new option created in the app navigator at the bottom. This section will be dedicated to finding and interacting one-on-one with users
- **Search option** to search for other Zupee users. **The results will be segregated into friend and non-friend users**
- **Ability to send/receive/accept friend requests** where one user sends the request, and if the receiver accepts it, both the users' friend lists adds the new connection.

Leaderboards

“Long term game progress tracker”

User benefits:

- Development of competitive spirit and the yearning to see their name on the leaderboards.
- Players can track their progress through their standings on the leaderboards for different games

Features:

- **Build communities as separate sections** where Leaderboards will be displayed. Each game will have a separate community. All game communities are public and open to all
- **Game servers already collect list of winners at the end of each game.** This can just be collated and displayed under the leaderboard tab on each community.
- **Different variations to leaderboards** can be created for more engagement (weekly, monthly, etc.)

Zupee Rich clubs

“Leveraging the basic principle of money-based gaming platforms and extending it as a social status”

User benefits:

- Exclusive access to create and play in tournaments
- Access to higher entry fee games
- Access to recommended tournaments which have better ROI than the general ones

Features:

- **Define tiers like silver, gold, diamond** at relevant earning levels
- **Profile badge** to stand out from the rest
- Game server to create **exclusive set of better ROI games** for access to **only Zupee rich club members**

Mockups: Wait screen + Friends section added to app navigator

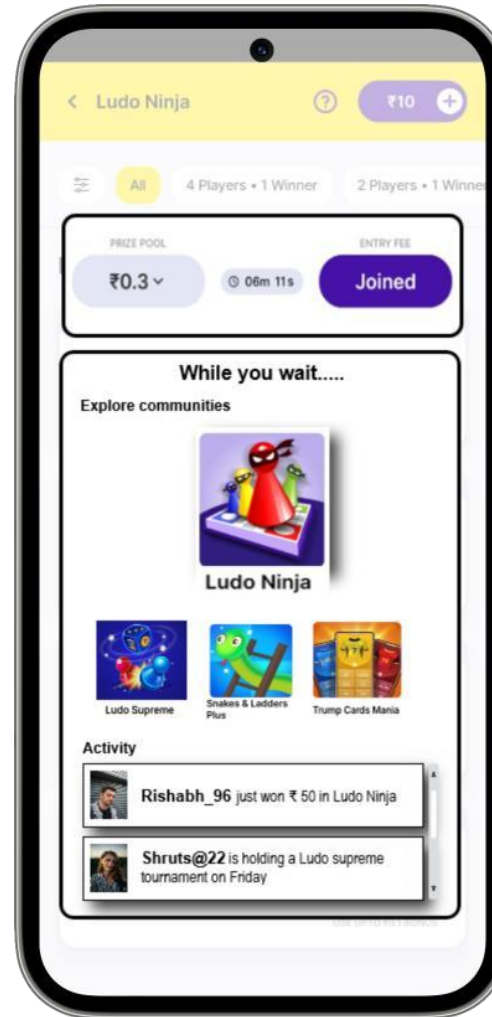

Wait screen modification to drive engagement

We are losing a major chunk of engagement time with users while they wait for a game to start. We can redirect the users to our engagement solutions at this point

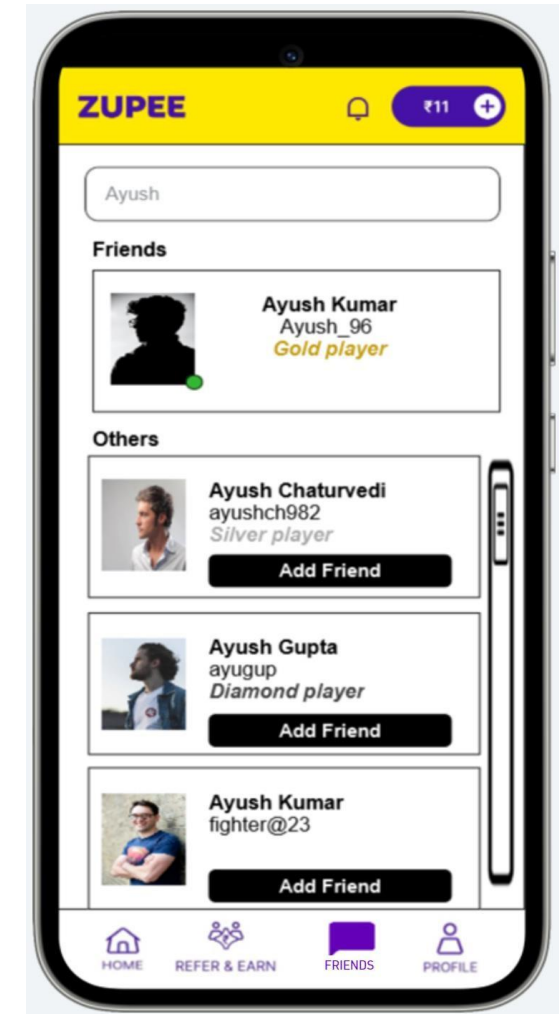

Waiting time before a game starts can be as long as 15 mins. Engagement can be driven through this page generating awareness as well as providing call to actions to the new social features

How it works:

- **Show a new popup** as soon as the user joins a game and has time to spare
- **Add sections to this popup** with links to:
 - 1) Explore various communities and their leaderboards
 - 2) Chat with online friends

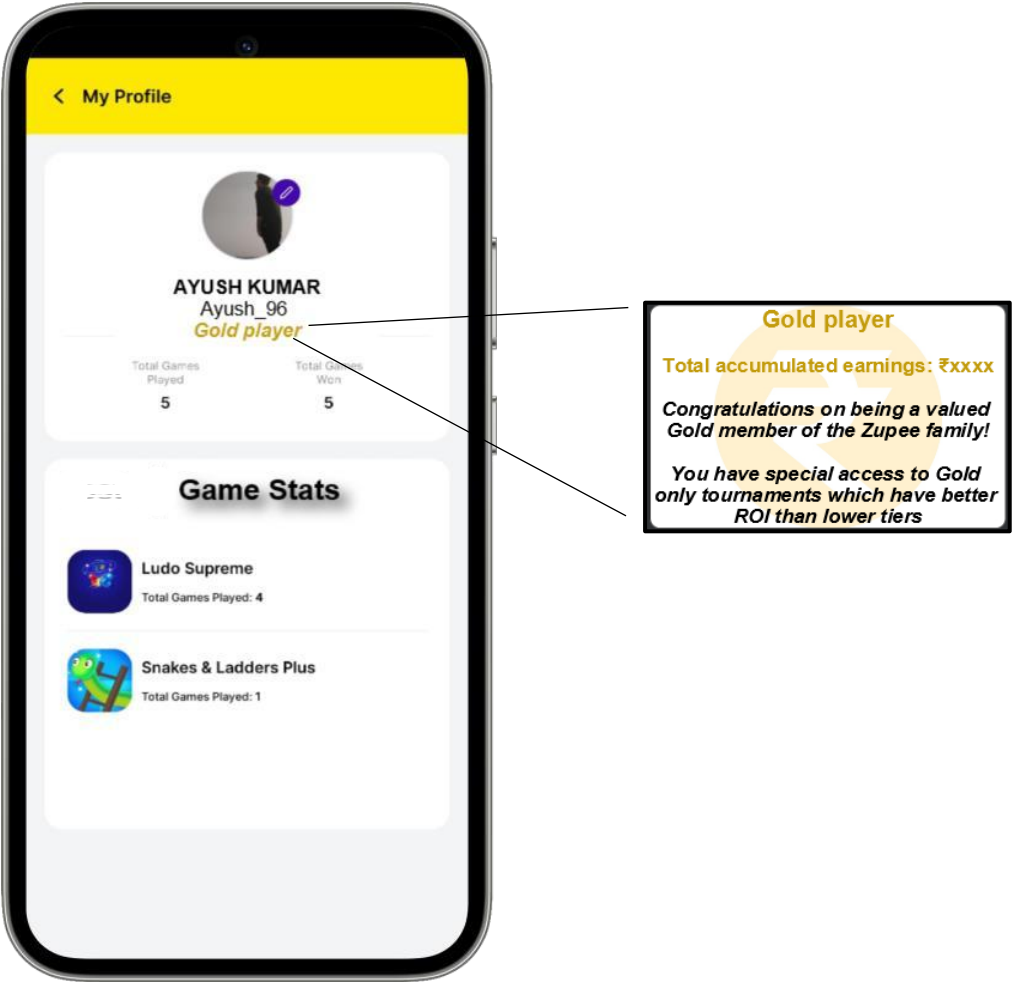

User has the option to visit communities or check out their friends' activities while they wait for their game to start.

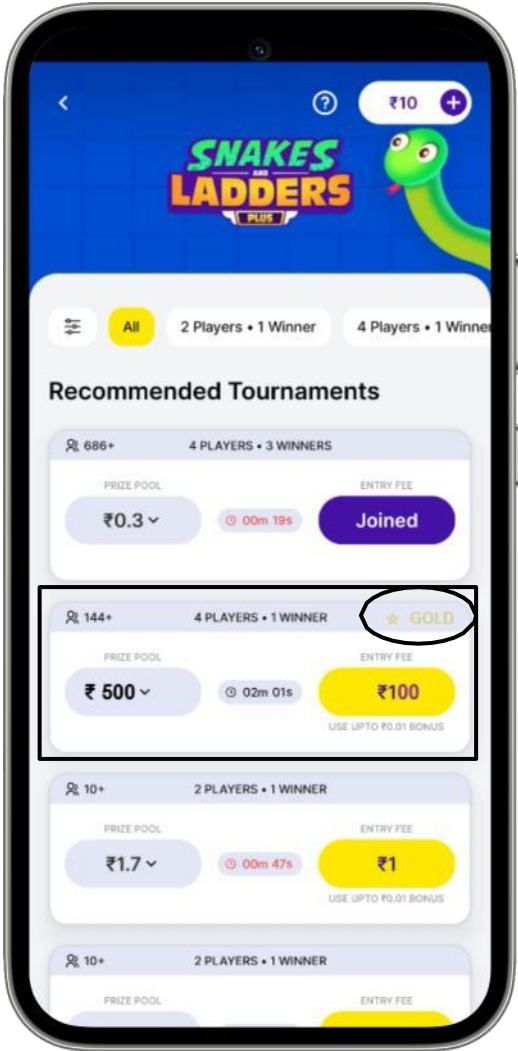

The new friends section is accessible from the menu option at the bottom

Mockups: Zupee Rich clubs

Rich club members have the relevant badge added on their profiles in addition to the profile search results

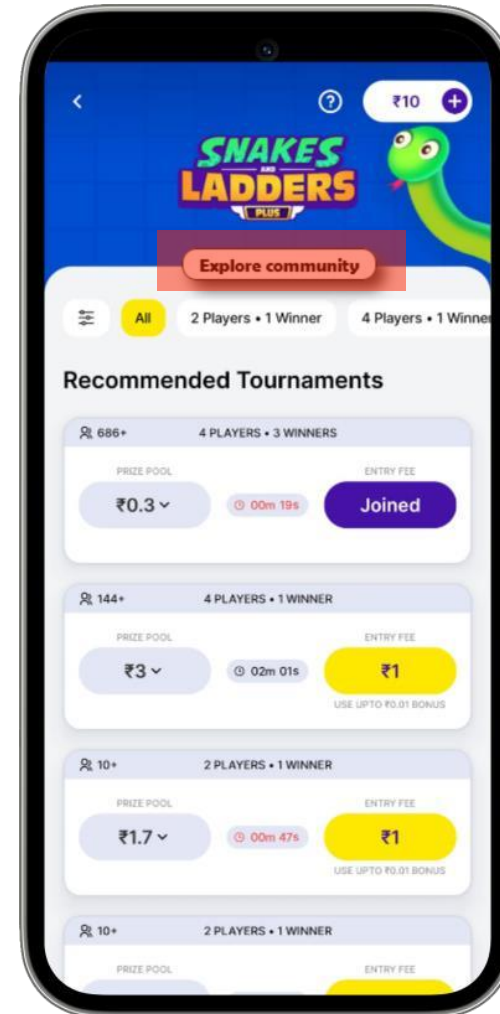

Exclusive access to High ROI game

Mockups: Communities to access leaderboards

Communities will be the gateway for the social media section of the platform that can be developed to include more features later on. Currently they will include leaderboards pertaining to each game

While the user explores the other touchpoints of the app, they will be shown the remaining time for the game to start at the top, so that they do not miss it

Communities can also be accessed from the game page directly

Go-to market plan

Pre Launch

Establish a roadmap for the social engagement feature.
Train internal teams.
Establish metrics to be kept under surveillance

Feature development

Develop the prototype
Release internal beta and check target metrics
Promotion strategies to be generated and tested

Beta launch

Introduce the identified features for the selected set of external beta users.
Measure product-market fit achievement

Feedback

Take constant feedback from the users on the new introduced features
Measure identified metrics on a relative basis to identify the adoption of these features in the user base

Iterative Releases

Inculcate feedback into the product and make this an iterative process so that consequent problems can also be solved in a shorter time period

Thank you!
